## **RESMLP**

**Implementation** 

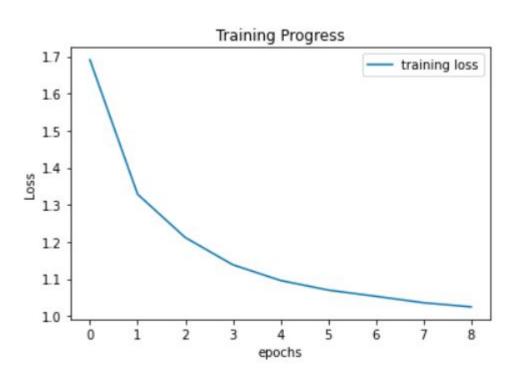

#### **Architecture**

### **Hyperparameters**

```
Dataset = Cifar10
Image size = 32
patch_size = 16
num_layers = 12
batch_size = 32
lr = 1e-2
epochs = 10
Number of parameters = 14,978,170
```

## **Progress so far**

## **Training remarks**

- The architecture is straightforward
- Training is fairly stable with smooth curves

# Self supervised with Dino

#### **Demo**
